NEW 2015-up 3.7L V6 Mustang CustomProCharger Upgrade Kit 80% HP INCREASE over stock !

There has been a lot of interest in supercharger systems for the 2015-up 3.7's and we've got you covered with our CUSTOM ProCharger-based supercharger upgrade system. We were the first to supercharge a 2015 model and based on our extensive design, testing and tuning efforts, this system adds tremendous power yet retains stock-like drivability and little or no loss of fuel consumption under normal driving conditions. Our system worked so well, ProCharger used a lot of what we learned in their kit development. More power, same fuel efficiency, how can you go wrong? We offer this system as an upgrade to the 2015-up 3.7L ProCharger tuner kit. The upgrade kit consists of these unique components:

- **Billet aluminum upper-to-lower intake manifold spacer:** Increases low and mid-RPM torque output and locates the throttle body back to the normal position: **\$250**

- **Screened supercharger bellmouth inlet:** Increases performance by eliminating restrictive air box with little or no increase in air charge temperature: **\$225**

- **Hi-Flow stainless steel inlet tube:** Eliminates multiple restrictive 90 degree bends of the standard inlet tube: **\$300**

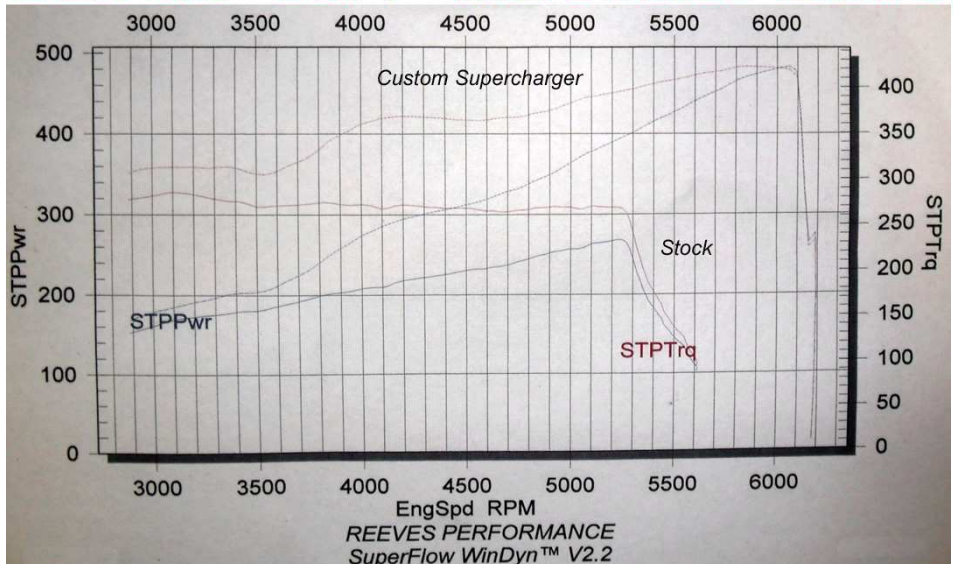

- **Compressor pulley** increases boost from standard 8PSI to 12PSI: **\$105**

- 65 pound/hour fuel injectors: **\$450**

- **Fuel pump booster:** **\$325**

- **Iridium spark plugs:** **\$90**

SUPER SIX MOTORSPORTS

Dyno testing conducted on the same car on the same dyno. All tests in 4th gear. Stock 4th gear 133 MPH speed limiter @ 6200RPM. Tests at higher RPM or use of 3rd gear would yield even higher output. Automatic, stock 3.15 gears. Test conditions included ported intake manifolds, short tube headers and aluminum 3.5" driveshaft.
